

ABSTRACT OF THE DISCLOSURE

An exercise mat and punching assembly combination includes a base
5 having a bottom wall, a top wall and a peripheral wall such that a
substantially watertight interior of the base is defined. An inlet conduit
extends into the interior. A peripheral lip is attached to and extends
upwardly from the peripheral wall. A central member is selectively
positionable on the top wall such that the central member is supported in
10 vertical orientation by the peripheral lip. A panel comprised of a
cushioning material has a size and shape such that the panel may be
extended around the central member. A fastening assembly is attached to
the panel for releasably fastening it around the central member. The
interior of the base may be selectively filled with a liquid.
